CAREER SUMMARY:

Enterprise Fullstack Developer with hands-on experience in Spring Boot, Angular, and Laravel, delivering scalable web applications and secure backend APIs. Proven ability to contribute to government-scale systems and enterprise platforms. Strong in API integration, database optimization, and cloud-based storage solutions (AWS S3, MinIO).

WORK EXPERIENCE:

HeiTech Padu Berhad | Cyberjaya

Software Developer | July, 2025 - Present

- Contributed to the development of a large-scale government enterprise system supporting national-level business processes
- Developed multiple business process frontend modules using Angular, improving system usability and workflow efficiency
- Designed and implemented backend APIs using Spring Boot (Java) to support business processes
- Integrated Angular frontend with Spring Boot backend, ensuring seamless data flow and system reliability
- Built a MinIO-based API for secure file handling and preview of uploaded objects

Arena Auctioneers Sdn Bhd | Shah Alam

Junior Software Engineer | November, 2024 - Jun, 2025

- Developed and enhanced system features based on cross-department requirements using HTML, CSS, JavaScript, and PHP
- Implemented AWS S3 integration for file upload, deletion, and preview (PDF, images), improving scalability and file management
- Automated daily database backups from Cloudways to local NAS storage, ensuring data reliability and disaster recovery readiness
- Built automated notification system using Telegram API triggered by cron jobs, improving real-time communication and monitoring
- Developed HR system features using Laravel, including calendar-based leave management for staff

Golac Commerce (M) Sdn Bhd

Intern in IT & Web Developer | Apr 2024 - Sept 2024

- Updated and maintained WordPress websites, managed physical assets, and ensured IT hardware and network reliability.
- Designed and developed web systems using HTML, Bootstrap, and PHP, including the G-leave Management System.
- Conducted website testing, performed Wi-Fi speed tests, and optimized system performance for high reliability.

RELEVANT PROJECTS:

EduNexis – Student Oversight System

- Developed a fullstack student monitoring system to track academic performance, attendance, and student records
- Built RESTful APIs using Laravel and integrated with frontend dashboard
- Designed role-based access system (admin, teacher, student)
- Implemented data tracking and reporting features for better decision-making
- Integrated Docker for development environment setup and system deployment

G-Leave – Leave Management System (Internship Project)

- Developed a fullstack Leave Management System for Golac Commerce (M) Sdn Bhd
- Built the system using HTML, CSS, JavaScript, and PHP with MySQL database
- Implemented role-based access control for Admin and Staff
- Generated PDF reports using TCPDF for leave tracking and documentation

QuizzyQuest – Educational Game (Final Year Project)

- Developed an educational quiz-based video game using the Godot game engine and GDScript
- Designed interactive gameplay mechanics to enhance user engagement and learning experience
- Implemented game logic, scoring system, and UI elements within the game environment
- Built progression system to track player performance and quiz results

EDUCATION:

2022 - 2025 | Kolej Vokasional Gerik

Diploma in Database Management System Technology & Web Applications

- Gained hands-on experience in web development, programming, and relational database management systems (RDBMS)
- Developed practical skills in backend and frontend development, including system design and implementation
- Acquired knowledge in networking, server installation, and IT infrastructure setup
- Applied project management methodologies in academic and system development projects
- Explored mobile application development and modern development tools
- Completed Final Year Project focused on an educational video game, “QuizzyQuest”, developed using the Godot game engine and GDScript
- Designed interactive quiz-based gameplay to enhance user engagement and learning experience
- Implemented game logic, UI elements, and scoring system within the game environment

SKILLS:

- **Frontend**: Angular 19 (Primary), Vue.js (Basic)
- **Backend**: Spring Boot, Laravel
- **Mobile Development**: Android Studio, Flutter(learning)
- **Game Development**: Godot, GDScript
- **Design Tools**: Canva, Figma (learning)
- **Cloud & Storage**: AWS S3, MinIO
- **Tools**: Git, Postman, Docker, Cloudways
